

Catalog Update Process for 3D Objects in ApliCAD Interior 6.1

In ApliCAD interior 6.1 has developed a new system for 3D objects, which includes search functions and other interesting features that considerably improve the previous system.

In addition to improved availability of catalogs over the Internet and this makes it much easier to update them.

This Technical Note explains the process for installing and updating 3D catalogs.

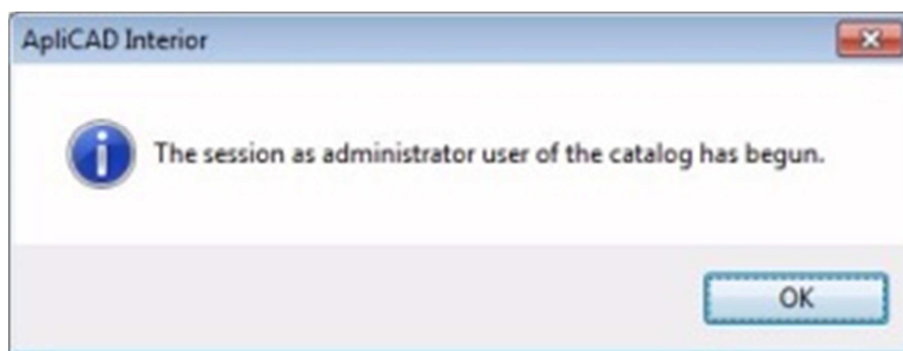

Step 1 – Login as administrator of the catalog.

As adding new updates catalog of 3D objects is a task that modifies the information of the entire database for all users of the system within an organization to do this, you need to be identified as Catalog Manager. It is worth remembering that if you have not ever changed the Administrator password is "admin "

To log in as administrator of the catalog, we clicked on the setup icon , and then select the button,  which we request the admin password:

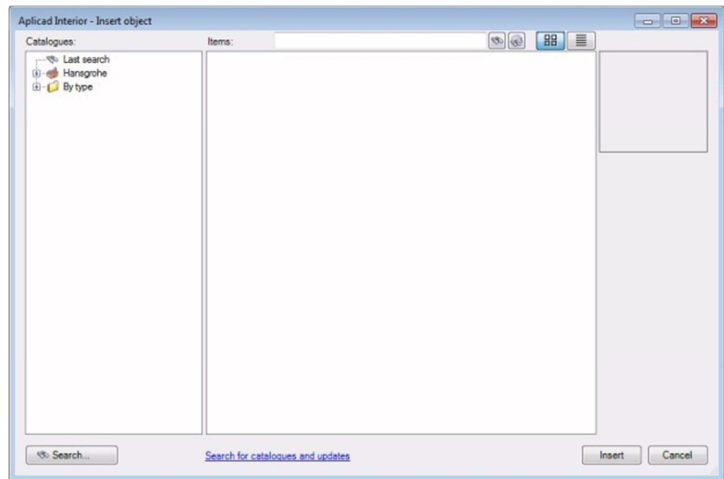

Correct password (admin if never changed) and if successful, the following message:

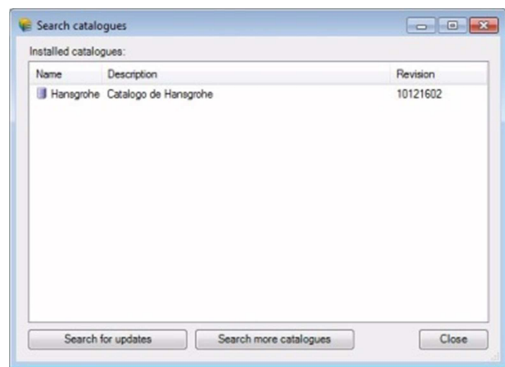

From this moment we can manage the catalog of ceramic elements, as well as 3D objects.

Step 2 – Check for new catalogs or updates of already installed.

For this, we enter the submenu of 3D Objects , then access through button , which gives way to the next dialog box to insert 3D objects

As we can see, only appears a catalog installed (Hansgrohe) so we can click on the link below "Search catalogues and updates ", so that you receive the following dialog box:

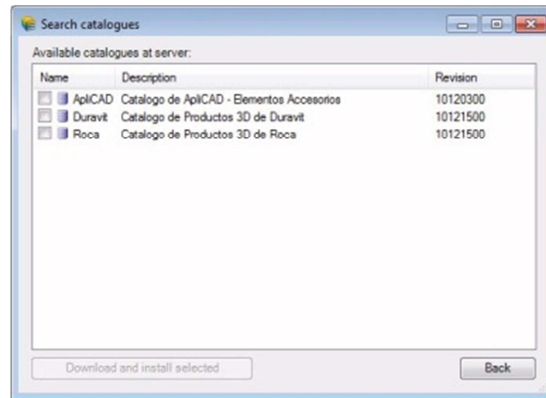

If you click on the "Check for Updates", the system was connected online to an application server and check if there is any change in the catalogs currently installed (in this case only Hansgrohe).

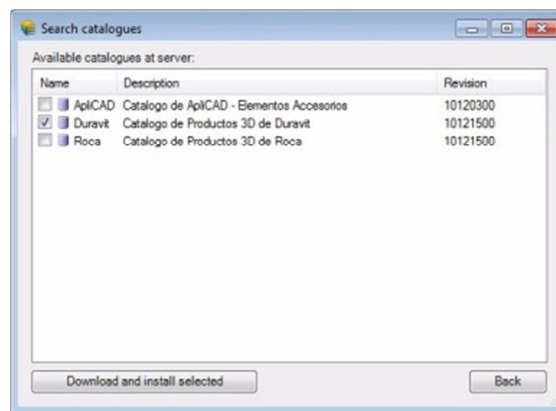

If you click on the "Find Catalogs" the system was connected online to an application server and check if there are new catalogs are not installed, appearing in our case as follows:

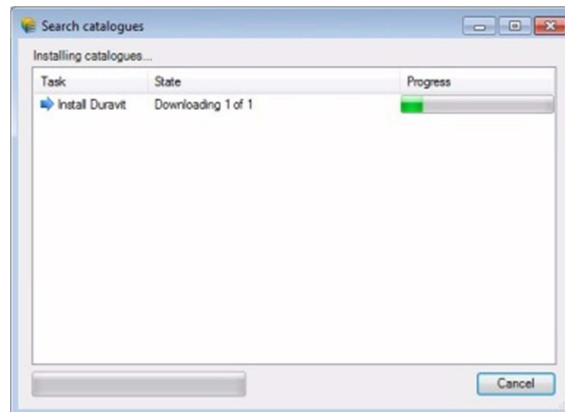

Click on OK and display the new catalogs:

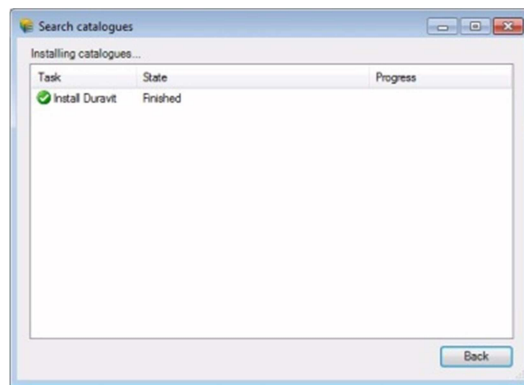

You can select all or only some of the catalogs, in this case we'll select the catalog Duravit

And click on "Download and install selected", starting the download and installation:

The process is fully automatic and ends with a warning window indicating whether the process has been successful.

When you close all windows, and displayed and used the new catalog installed.
